ABOUT

As a lifelong learner passionate about technology, I am seeking opportunities where I can continue to grow, tackle new challenges and contribute to a team. I am a dedicated software developer and system administrator with experience building systems, secure infrastructure, and creating solutions for a variety of small and medium businesses I have worked with.

EXPERIENCE

Information Technology Analyst

Toledo, Ohio

Digital-55, LLC

2020-Present

- Solely Developed and maintained a lead generation system managing 250,000+ records, delivering 60,000+ unique leads through instant and scheduled reports, supporting sales teams for 50+ clients.
- Collaborated directly with clients to integrate our systems with their third-party platforms' APIs, improving convenience and increasing value to our clients.
- Worked with PCI-DSS and HIPAA-compliant systems, monitored third-party software for security vulnerabilities (CVEs), implemented mitigations, and supported compliance audits.
- Conducted technical support, maintenance, and development for 250+ client WordPress websites, including custom PHP plugin development to meet specific client needs.
- Coordinated with overseas teams to provide 24/7 client support, ensuring quality assurance, off-hours maintenance, and seamless system updates.
- Conducted on-site and off-site hardware setup and repairs, ensuring minimal downtime during infrastructure changes and while diagnosing and treating hardware failure events.
- Managed internal IT operations, including employee on/off-boarding, system access provisioning, and asset management. Implemented a company-wide password manager and ticketing system to enhance security, streamline support requests, and improve overall IT efficiency.
- Led digital marketing campaigns on Google Ads, LinkedIn Ads, and Facebook Ads, leveraging retargeting and A/B testing to maximize lead generation and enhance brand visibility for clients.

Co-Owner

Toledo, Ohio

Ampolic Digital Solutions LLC

2021-Present

- Co-founded small business to provide open-source web and email hosting. Developed a set of extensive POSIX-compliant scripts for automating web and mail server management in Linux/BSD environments.
- Hosted and managed a full open-source email server stack. Monitored both incoming spam complaints as well as outgoing mail reputation to ensure deliverability and ease of use.
